SUMMARY

Final-year Information Technology engineering student (CGPA 9.33) who builds backend systems and data-driven applications with Python, Java, SQL and Node.js. Built a churn-prediction model with a Flask dashboard and a Firebase-based food donation platform, and contributed to an AI-powered ticketing app as a project mentee at Persistent Systems. Seeking internships in software development, backend development or data analytics.

SKILLS

- **Languages & Core:** Python, Java, C++, C, PHP, SQL, JavaScript; DSA, OOP, DBMS
- **Web & Databases:** HTML, CSS, Flask, MySQL, PostgreSQL, Firebase
- **Backend & QA:** Node.js, Express, REST APIs, JWT, bcrypt, RBAC, Jest, Docker, Docker Compose, FastAPI (exposure)
- **Tools:** Git, GitHub, VS Code, Figma, Cursor AI, Thunder Client

PROFESSIONAL EXPERIENCE

Project Mentee, SupportSenseAI, *Persistent Systems* | *8-week mentorship program* 08/2026 – 10/2026

- A ticketing platform for Customers, Agents and Admins, with a Node.js/PostgreSQL backend and a Python FastAPI service for AI triage, department assignment, response verification and timeline summarization.
- Contributed to the backend (Node.js, Express, PostgreSQL): REST APIs, routes, controllers, models and ticket workflows.
- Worked on bcrypt password hashing for secure credential storage; tested API endpoints with Thunder Client.
- Tested ticket workflows, JWT authentication and role-based access control (RBAC) across 3 roles (Customer, Agent, Admin).
- Performed QA and security checks on internal-note visibility, input handling, search/filter functionality and rate limiting.
- Ran the team's Jest tests for authentication, RBAC and controllers; used Docker and Docker Compose to run and test the app locally.
- Tech: Node.js, Express, PostgreSQL, JWT, bcrypt, Jest, Docker, Docker Compose, Thunder Client, FastAPI

TECHNICAL PROJECTS

Food Waste Management System, *HTML, CSS, JavaScript, Firebase*

- Developed a food donation web platform connecting donors and NGOs, using **Firebase** and JavaScript for real-time data storage and retrieval (tested with 10+ records).
- Implemented a role-based interface (Donor/NGO) and **CRUD operations**, reducing manual coordination effort by ~40% through streamlined food pickup tracking.

Customer Segmentation & Retention Analysis System, *Python, Pandas, Matplotlib, Flask, HTML*

- Built a **Random Forest model** achieving **96.27% accuracy** for telecom churn prediction, analyzing **667+ customer records** to uncover behavioral patterns.
- Identified **92 high-risk customers** and a **14% churn rate** to support targeted retention strategies and data-driven decisions.
- Applied **KMeans clustering** to segment customers into **3 groups** (low, medium, high value) and developed a **Flask based dashboard** to visualize churn predictions and customer insights.

EDUCATION

Bachelor of Engineering, *Shree Rayeshwar Institute of Engineering and Information Technology, CGPA*: 9.33 Present

Higher Secondary School Certificate (H.S.S.C), *Madkaikar Higher Secondary School Of Arts And Science*, 80% 2023

Secondary School Certificate (S.S.C), *Madkaikar Navchaitanya High School*, 87.7% 2021

ACHIEVEMENTS & CERTIFICATIONS

- Completed **Introduction to Generative AI Studio** (Google Cloud course via Simplilearn SkillUP), August 2026.
- Participated in **Smart India Hackathon (SIH) 2026**. Previously presented "AI-Driven Virtual Interview Platform for Automated Candidate Assessment and Feedback" at SIH as part of Team Knowledge Crew **(2025)**.
- Competed in **2 coding competitions** and designed UI/UX prototypes in **4 Figma design competitions**.
- Completed workshops on ReactJS, Cursor AI and Umbraco; contributed to organizing college events.
